#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2, 4, 6, 7, 9, 11, 12, 14 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franseen et al (5,470.228) in view of Andreiko et al (5,622,494) and JP 11-27650. Franseen shows a number of different embodiments of brackets corresponding to the claimed structure. Figures 1A-1C corresponds to the structure set forth in claims 1-6, such as the tie wings, center leg, notches and elliptical configuration. Figure 4D shows structure corresponding to the structure set forth in claims 7-11, i.e. the trapezoidal configuration, and Figure 5B and 6B show structure corresponding to the structure set forth in claims 12-16, namely the convex portions 44 extending labially from the archwire floor. Franseen does not disclose a base having a substantially continuous pattern of characters and intermediate space and including a discontinuous perimeter rail. Andreiko shows an orthodontic bracket 10 comprising a body 12 and a base 110 connected to the body. The base includes an exterior surface 114 which includes a substantially continuous pattern of characters 199 and intermediate spaces. JP 11-276504 shows an orthodontic bracket comprising a body 2 and a base 1 connected to the body. The base includes an exterior surface having a discontinuous perimeter rail having a perimeter length and at least one cavity along its

length (see Figs. 3 and 4). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the base of Franseen with a substantially continuous pattern of characters and intermediate space and a discontinuous perimeter rail, in view of Andreiko and JP 11-27650, in order to increase the bond strength of the bracket.

Claims 3, 8 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franseen et al (5,470.228) in view of Andreiko et al (5,622,494) and JP 11-27650, as applied to claims 1, 7 and 12, and further in view of Webb (4,430,061). The bracket of Franseen as modified by Andreiko and JP 11-27650 does not disclose the surface finish of the perimeter rail. Webb shows an orthodontic bracket comprising a base that is formed with means to increase the bonding strength of the bracket. The bracket, including the base, is polished to have a smooth surface for comfort and aesthetic reasons. It would have been obvious to one of ordinary skill in the art at the time the invention was made to smooth the rail surfaces of the bracket of Andreiko as modified by Andreiko and JP 11-27650, as taught by Webb, to make the bracket more comfortable and aesthetic.

#### Allowable Subject Matter

Claims 5, 10 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 17-36 are allowed.

Art Unit: 3732

## Drawings

The drawings were received on July 10, 2006. These drawings are approved by the examiner.

# Response to Arguments

Applicant's arguments filed July 10, 2006 have been fully considered but they are not persuasive. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the examiner has stated that one of ordinary skill in the art would be motivated to combine the features of Andreiko and JP 11-27650 to increase bond strength of the bracket, which would be desirable to prevent the bracket from prematurely debonding from the tooth.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cary E. O'Connor whose telephone number is 571-272-4715. The examiner can normally be reached on M-Th 7:00-3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cris Rodriguez can be reached on 571-2724964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
